

Energy performance certificate (EPC)

<p>12, Aubrey Road MANCHESTER M14 6SE</p>	<p>Energy rating D</p>	<p>Valid until: 21 May 2028</p> <p>Certificate number: 8008-2816-5129-2396-4583</p>
---	-----------------------------------	---

Property type

Semi-detached house

Total floor area

169 square metres

Rules on letting this property

Properties can be let if they have an energy rating from A to E.

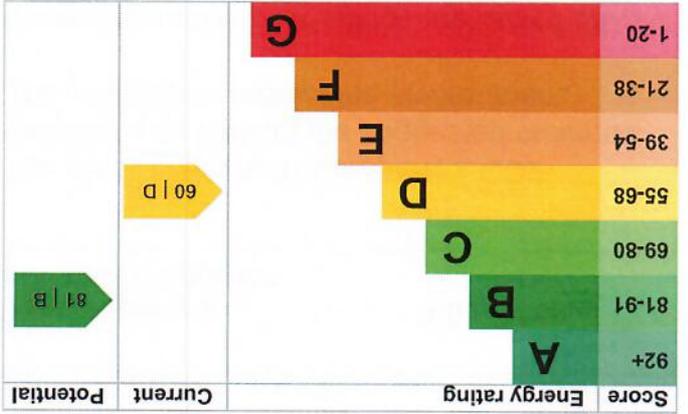

You can read [guidance for landlords on the regulations and exemptions](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance)

(<https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance>).

Energy efficiency rating for this property

This property's current energy rating is D. It has the potential to be B.

[See how to improve this property's energy performance.](#)

For properties in England and Wales:

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

The graph shows this property's current and potential energy rating.

the average energy rating is D
the average energy score is 60

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Solid brick, as built, no insulation (assumed)	Poor
Roof	Pitched, no insulation (assumed)	Very poor
Roof	Pitched, limited insulation	Very poor
Roof	Roof room(s), no insulation (assumed)	Very poor
Window	Fully double glazed	Average
Main heating	Boiler and radiators, mains gas	Good
Main heating control	Programmer and room thermostat	Average
Hot water	From main system	Good
Lighting	Low energy lighting in 77% of fixed outlets	Very good
Floor	Solid, no insulation (assumed)	N/A
Secondary heating	None	N/A

Primary energy use

The primary energy use for this property per year is 253 kilowatt hours per square metre (kWh/m²).

Environmental impact of this property

This property's current environmental impact rating is E. It has the potential to be C.	This property produces 7.5 tonnes of CO ₂
Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO ₂) they produce each year. CO ₂ harms the environment.	This property's potential production is 3.5 tonnes of CO ₂

An average household produces 6 tonnes of CO₂

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

You could improve this property's CO₂ emissions by making the suggested changes. This will help to protect the environment.

Improve this property's energy rating

Step	Typical installation cost	Typical yearly saving
1. Flat roof or sloping ceiling insulation	£850 - £1,500	£71
2. Room-in-roof insulation	£1,500 - £2,700	£146
3. Internal or external wall insulation	£4,000 - £14,000	£294
4. Floor insulation (solid floor)	£4,000 - £6,000	£39
5. Heating controls (TRVs)	£350 - £450	£45
6. Solar photovoltaic panels	£5,000 - £8,000	£263

Paying for energy improvements

You might be able to get a grant from the [Boiler Upgrade Scheme \(https://www.gov.uk/apply-boiler-upgrade-scheme\)](https://www.gov.uk/apply-boiler-upgrade-scheme). This will help you buy a more efficient, low carbon heating system for this property.

Estimated energy use and potential savings

Based on average energy costs when this EPC was created:

Estimated yearly energy cost for this property
£1540

Potential saving if you complete every step in order
£596

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

Heating use in this property

Find ways to save energy in your home by visiting www.gov.uk/improve-energy-efficiency.

Saving energy in this property

Type of heating	Estimated energy used	Potential energy savings by installing insulation	Type of insulation	Amount of energy saved
Water heating	2205 kWh per year	£596	Solid wall insulation	5985 kWh per year
Space heating	27295 kWh per year	£1540	Loft insulation	1358 kWh per year

Estimated energy used to heat this property

Heating a property usually makes up the majority of energy costs.

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
