# Energy performance certificate (EPC)

|                                        |                           |                     |                          |
|----------------------------------------|---------------------------|---------------------|--------------------------|
| 7, Marlow Road<br>LEICESTER<br>LE3 2BQ | Energy rating<br><b>E</b> | Valid until:        | 15 January 2029          |
|                                        |                           | Certificate number: | 9668-1039-6289-4271-5974 |

Property type Mid-terrace house

Total floor area 82 square metres

## Rules on letting this property

Properties can be let if they have an energy rating from A to E.

You can read [guidance for landlords on the regulations and exemptions \(https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance\)](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

## Energy rating and score

This property's energy rating is E. It has the potential to be B.

[See how to improve this property's energy efficiency.](#)

The graph shows this property's current and potential energy rating.

**Properties get a rating from A (best) to G (worst) and a score.** The better the rating and score, the lower your energy bills are likely to be.

For properties in England and Wales:

- the average energy rating is D
- the average energy score is 60

## Breakdown of property's energy performance

### Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property's age and type. They are used for features the assessor could not inspect.

| Feature | Description                                    | Rating    |
|---------|------------------------------------------------|-----------|
| Wall    | Solid brick, as built, no insulation (assumed) | Very poor |
| Wall    | Cavity wall, as built, no insulation (assumed) | Poor      |
| Roof    | Pitched, 150 mm loft insulation                | Good      |
| Roof    | Flat, no insulation (assumed)                  | Very poor |

| Feature              | Description                                 | Rating  |
|----------------------|---------------------------------------------|---------|
| Window               | Fully double glazed                         | Average |
| Main heating         | Boiler and radiators, mains gas             | Good    |
| Main heating control | Programmer, room thermostat and TRVs        | Good    |
| Hot water            | From main system, no cylinder thermostat    | Average |
| Lighting             | Low energy lighting in 63% of fixed outlets | Good    |
| Floor                | Suspended, no insulation (assumed)          | N/A     |
| Floor                | Solid, no insulation (assumed)              | N/A     |
| Secondary heating    | Room heaters, electric                      | N/A     |

## Primary energy use

The primary energy use for this property per year is 328 kilowatt hours per square metre (kWh/m<sup>2</sup>).

### ▶ [About primary energy use](#)

Primary energy use is a measure of the energy required for lighting, heating and hot water in a property. The calculation includes:

- the efficiency of the property's heating system
- power station efficiency for electricity
- the energy used to produce the fuel and deliver it to the property

## How this affects your energy bills

An average household would need to spend **£1,085 per year on heating, hot water and lighting** in this property. These costs usually make up the majority of your energy bills.

You could **save £434 per year** if you complete the suggested steps for improving this property's energy rating.

This is **based on average costs in 2019** when this EPC was created. People living at the property may use different amounts of energy for heating, hot water and lighting.

## Heating this property

Estimated energy needed in this property is:

- 11,378 kWh per year for heating
- 4,391 kWh per year for hot water

# Impact on the environment

This property's environmental impact rating is E. It has the potential to be B.

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO<sub>2</sub>) they produce each year.

## Carbon emissions

|                                             |                               |
|---------------------------------------------|-------------------------------|
| <b>An average household produces</b>        | 6 tonnes of CO <sub>2</sub>   |
| <b>This property produces</b>               | 4.7 tonnes of CO <sub>2</sub> |
| <b>This property's potential production</b> | 1.7 tonnes of CO <sub>2</sub> |

You could improve this property's CO<sub>2</sub> emissions by making the suggested changes. This will help to protect the environment.

These ratings are based on assumptions about average occupancy and energy use. People living at the property may use different amounts of energy.

# Steps you could take to save energy

## ▶ [Do I need to follow these steps in order?](#)

Yes. Each step builds on the one before it so you can save the most energy.

For example, it's more energy efficient to insulate your home before you buy a new boiler. A well insulated home will lose less heat so you do not have to run your boiler as often.

## Step 1: Flat roof or sloping ceiling insulation

|                                          |               |
|------------------------------------------|---------------|
| Typical installation cost                | £850 - £1,500 |
| Typical yearly saving                    | £25           |
| Potential rating after completing step 1 | <b>55 D</b>   |

## Step 2: Internal wall insulation

|                                                 |                  |
|-------------------------------------------------|------------------|
| Typical installation cost                       | £4,000 - £14,000 |
| Typical yearly saving                           | £216             |
| Potential rating after completing steps 1 and 2 | <b>64 D</b>      |

## Step 3: Floor insulation (suspended floor)

|                                                |               |
|------------------------------------------------|---------------|
| Typical installation cost                      | £800 - £1,200 |
| Typical yearly saving                          | £57           |
| Potential rating after completing steps 1 to 3 | <b>66 D</b>   |

## Step 4: Hot water cylinder insulation

Increase hot water cylinder insulation

|                                                |                                                                                          |
|------------------------------------------------|------------------------------------------------------------------------------------------|
| Typical installation cost                      | £15 - £30                                                                                |
| Typical yearly saving                          | £29                                                                                      |
| Potential rating after completing steps 1 to 4 |  67 D |

## Step 5: Low energy lighting

|                                                |                                                                                          |
|------------------------------------------------|------------------------------------------------------------------------------------------|
| Typical installation cost                      | £15                                                                                      |
| Typical yearly saving                          | £19                                                                                      |
| Potential rating after completing steps 1 to 5 |  68 D |

## Step 6: Hot water cylinder thermostat

|                                                |                                                                                            |
|------------------------------------------------|--------------------------------------------------------------------------------------------|
| Typical installation cost                      | £200 - £400                                                                                |
| Typical yearly saving                          | £41                                                                                        |
| Potential rating after completing steps 1 to 6 |  70 C |

## Step 7: Solar water heating

|                                                |                                                                                            |
|------------------------------------------------|--------------------------------------------------------------------------------------------|
| Typical installation cost                      | £4,000 - £6,000                                                                            |
| Typical yearly saving                          | £46                                                                                        |
| Potential rating after completing steps 1 to 7 |  72 C |

## Step 8: Solar photovoltaic panels, 2.5 kWp

|                           |                 |
|---------------------------|-----------------|
| Typical installation cost | £5,000 - £8,000 |
| Typical yearly saving     | £295            |

## Potential rating after completing steps 1 to 8

**82 B**

## Advice on making energy saving improvements

## Who to contact about this certificate

### Contacting the assessor

If you're unhappy about your property's energy assessment or certificate, you can complain to the assessor who created it.

|                        |                                                                        |
|------------------------|------------------------------------------------------------------------|
| <b>Assessor's name</b> | Colin Smithson-Connelly                                                |
| <b>Telephone</b>       | 01664 444149                                                           |
| <b>Email</b>           | <a href="mailto:colin.sea@btinternet.com">colin.sea@btinternet.com</a> |

### Contacting the accreditation scheme

If you're still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

|                             |                                                                                    |

## About this assessment

**Assessor's declaration**

No related party

**Date of assessment**

16 January 2019

**Date of certificate**

16 January 2019

**Type of assessment** [RdSAP](#)

RdSAP (Reduced data Standard Assessment Procedure) is a method used to assess and compare the energy and environmental performance of properties in the UK. It uses a site visit and survey of the property to calculate energy performance.

This type of assessment can be carried out on properties built before 1 April 2008 in England and Wales, and 30 September 2008 in Northern Ireland. It can also be used for newer properties, as long as they have a previous SAP assessment, which uses detailed information about the property's construction to calculate energy performance.

## Other certificates for this property

If you are aware of previous certificates for this property and they are not listed here, please contact us at [mhclg.digital-services@communities.gov.uk](mailto:mhclg.digital-services@communities.gov.uk) or call our helpdesk on 020 3829 0748 (Monday to Friday, 9am to 5pm).
